

LITTLE DISCOVERIES

Camouflage

2

Many animals have colors or patterns that match their habitat.
It helps them to hide and it is called camouflage.
Draw a line from the animal to the habitat it matches.
How do these animals move about in their habitat?

Color all the pictures.
Cut them out. Put the
animals in one group, the
habitats in another. Cover your
eyes. Pick one animal and one habitat.
Act out what it would be like for the
animal to live in a strange place.
(Lion in a rabbit burrow!)
