

# Frog starts with F

If I were leapfrogging over a friend in a pond who might jump in and join the fun? A big-eyed, bouncy \_\_\_\_\_ with long legs and fancy webbed feet, that's who! We'd swim about in the cool water drinking and breathing through our skin. How cool is that! We'd keep a look out for a flying bug lunch to munch. And then, with one spectacular J-U-M-P we'd catch that lunch right out of the air!

How do you spell "Jump?"

Frogs are amphibians. That means they are cold-blooded. Cold-blooded animals, like frogs, become hotter or colder, depending on the temperature outside.

Are you ready to play **Frog Jump**? Color and cut out the circles. Space them out across the room and see if you can jump from one letter to the next. Keep spreading the letters farther and farther apart. Using a tape measure, see how far you jumped.
