

## What do you hear in the garden?

Can you hear bees buzzing and hummingbirds humming? Use your ears and share with a friend all the things you can hear.

**Pollination:**  
When an animal moves pollen grains from one part of a flower to another part. This is how some plants make fruit or seeds.

### Pollen Pathway!

The bee needs nectar to make honey. Draw a line along the pollen pathway and help the bee get sweet nectar (pollinate) from the flowers. Color each flower along the way. Humm, humm, humm along!

How many flowers did the bee pollinate?

What other flower pollinators do you see?
