The blue-footed booby is a seabird.

1

How can you tell? (Identification)

Feathers • Beak • Wings • Webbed feet (for swimming)

How does the bird use these features?

What do blue-footed boobies do? (Behavior)

2

Fly • Swim • Walk • Fish • Lay eggs • Sing/make calls
Dance • Flap • Dive • Make nests • Float on sea • Sleep
Eat fish • Take care of babies

Do people do any of these things?

What do boobies eat? (Healthy behaviors)

3

Fish/protein = good for brain and heart health. Muscles are mostly made of protein. Keratin is a type of protein that our hair and nails are made off. Protein is important for the whole body!

Do you think fish is good for people too?

4

How many letters are in "BLUE-FOOTED BOOBY"?

(Alphabet/letters)

Practice writing and saying each letter.

What do you call the mark between the two words?

Blue-footed Booby?

Many blue-footed boobies live on the Galapagos Islands. (Geography/habitat)

5

What is an island? What is it like to live on these islands?

An island is a piece of land surrounded by water. The Galapagos Islands were formed by volcanoes a very long time ago. The temperature doesn't change much; (66° - 88°). Warm season: Rain and sun. Cool season: Cloudy and dry. Many low, bushy plants and cactus.

How is it the same or different from where you live?
